PROFESSIONAL SUMMARY

Highly motivated Computer Engineering graduate seeking to apply and enhance my knowledge in software development, computer systems, and emerging technologies. Eager to contribute to engineering projects and gain professional experience while developing technical and problem-solving skills for long-term career growth in computer engineering.

WORK EXPERIENCE

JGC Technical Assistance Services Philippines, Inc. **January 2026 - April 2026** *IT Department (On-the-Job Training)*

- Assisted in daily IT operations, ensuring efficient management of hardware, software, and user systems.
- Provided technical support to maintain secure and effective use of computer systems, contributing to a reliable work environment.
- Installed and configured computers, peripherals, and necessary software applications to support user productivity.
- Supported network connectivity and assisted in resolving basic LAN and internet troubleshooting issues, fostering seamless communication.
- Documented IT procedures, system issues, and security-related incidents to enhance operational standards.

Susumi Philippine Logistics, INC. **July 2026 - Present**

IT Department (IT Associate)

- Administered and maintained servers, Microsoft 365 services, workstations, and network infrastructure.
- Provided technical support and troubleshooting for hardware, software, network, printer, and user-related issues.
- Installed and configured computers, peripherals, business applications, and LAN connections.
- Supported CCTV systems, network devices, and IT infrastructure maintenance.
- Prepared IT-related billing, procurement documents, quotations, and technical documentation.
- Managed IT asset inventory, service records, licenses, and documentation.
- Assisted in implementing security measures, system updates, and preventive maintenance activities.

EDUCATION

First Asia Institute of Technology and Humanities (Faith) Colleges **2022 - 2026**

BS Computer Engineering

THESIS PROJECT

Automated Fire and Smoke Detection with Fire Suppression System

- Developed an AI-based fire and smoke detection system using Raspberry Pi5, powered by Machine Learning for accurate real-time threat identification.
- Integrated dual-layer sensor system using CCTV camera and IR (Infrared) camera for enhanced detection reliability.
- Implemented high-precision automatic fire suppression actuation through programmed logic that triggers the system autonomously upon fire detection.
- Built a real-time monitoring interface accessible via localhost, allowing live camera feeds and system status to be displayed on connected screens.
- Performed IP camera calibration, height mapping, and directional monitoring setup for optimized coverage and detection accuracy.

CERTIFICATIONS & SKILLS

Skills: Python, Database Management, Automation Tools, User Interface Development, Technical Support, Troubleshooting, Networking, Electrical Circuit Analysis, Basic Electronics, Electrical Troubleshooting, Analytical Thinking, Time Management, Effective Communication.

Certifications: Occupational Safety and Health (OSH) for Safety Officer II
